The New WAHLBERT Peach
BETTER and HARDIER VARIETIES of FRUIT and NUT TREES
The New HALO Peach

SCHAFER WALNUT

(Plant patent No. 494)

For untold centuries the so-called "English" or "Persian" walnuts (*Juglans Regia*) have grown in most parts of Europe and Asia to latitudes as far north as 55 degrees and to altitudes of 6,000 feet. Their northern spread is 6,000 miles from Copenhagen to Manchukuo. Poland, the Carpathian mountains and the Russian Ukraine have many fine trees. Just where these came from we are not sure but very likely the Magyars brought them with them from what is now Manchukuo in the 9th century or in previous invasions.

Trees from these cold areas must, of necessity, grow fast in the spring and early summer and must mature their crop and wood early in the fall. All cold-country walnuts (from north China, Russia or Poland) seem to have these characteristics, in contrast to the ones brought to this country from France, Italy or southern Germany. It is unfortunate that we did not have good introductions from the cold sections earlier.

The Schafer Walnut comes from the northern edge of the Carpathian mountains near Bukowina, latitude 48 degrees north, longitude 26 degrees east. This is at considerable altitude with winter temperatures dropping to 40 or 50 degrees below zero. A very severe climate. Winter and summer isotherms would indicate temperatures like northern Montana. The ground freezes deeply.

DWARF TREES FOR YOUR BACK YARDS

Full sized fruit on little trees. Bear second year. 3 yr. Bartlett and Flemish Beauty Pear \$2.00 each 2 yr. Anoka Summer Apple \$1.25 each

STRAWBERRIES WITHOUT RUNNERS
Rockhill Everbearing

New. Bears first year. Attractive plants growing in a low mound with lots of luscious berries. Priced on back page.

EVERBEARING RASPBERRY
Indian Summer

Bears a heavy crop very early in season. Bears again in the fall over a long period. This berry is fine flavored, large size and moderately firm. Recommended for both home and commercial planting.

Prices on back page.

NEW PEACHES

Be Sure to Look Over Our List

All varieties cataloged are productive.

RED FLOWERING LOCUST
SCARLET HAWTHORN

Two lovely flowering trees.

Priced under Shade trees.

The original tree is growing at the farm home of Mr. and Mrs. Wm. Schafer near Yakima, Wash. The seed was brought from Bukowina by Mrs. Schafer. The tree has stood in its present location about 16 years. It now has a 50' spread and produces 300 or more pounds annually.

Tree—Rapid grower, tall and spreading.

Nuts—Large. Thin-shelled. Quality excellent. Very full-meated.

Bearing—Bears young, annually and abundantly.

Quality—Excellent. Considered by many as superior to Franquette.

From history and performance we consider this tree equal in hardiness to the American Black Walnut. Ripens a month earlier than the blacks. Dormancy begins about the same as blacks but the Schafer starts earlier in the spring.

The valuable Circassian Walnut timber used in furniture manufacture is from the walnut trees of this district and on into the Caucasians.

We estimate a yearly return of from 100 to 300 lbs. of nuts per tree at ten years of age. Plant 50 to 60 feet apart. Interplant with Wahlbert peaches.

Besides being a profitable orchard tree the Schafer Walnut is most desirable as an ornamental. Their rich, verdant foliage is most pleasurable to see. A combination of beauty, pleasure and profit.

SCHAFER WALNUT trees are worthy of planting on the best of orchard land, on the grounds of the finest home or country estate. A few of them will pay a lot of taxes, more of them will become a business and all of them will be a source of much pride and satisfaction.

We have been very gratified at the wide interest shown in the SCHAFER Walnut and have trees growing in over half of the States and several places in Canada. Our only difficulty seems to be to grow enough trees. Eventually we hope to have enough to meet the demand. In the meantime early orders will help us all. Walnuts seem to transplant better in the spring of the year so we prefer the spring season for delivery.

SCHAFER WALNUT TREES (grafted)
(plant patent #494)
price each in lots of

	1-11	12-24	25-50	50-100	100
5-8'	\$5.00	4.50	4.25	4.00	3.80
8' Up	7.50	6.50	6.00	5.50	5.00
2-5'	4.00	3.50	3.25	3.00	2.80

Unless otherwise ordered trees are cut back about 2/3 and the cuts waxed, ready for planting.

So far we have had no surplus cion wood. Besides there are many factors that enter into successful walnut grafting. For these reasons we have not offered any cion wood for sale.

In our quest for better varieties we have examined many seedlings and bud sports and are testing the ones that show genuine promise. Whether in fruits or men, "there is always room at the top." If you have something outstanding write us about it.

**MRS. SCHAFER holding Pan of
Schafer Walnut Meats.**

Yakima, Washington
Oct. 28, 1939

DEAR MR. TUTTLE:

The original Schafer Walnut tree together with a few seedlings from the tree are the only English Walnuts that survived the winter freezes in the Yakima Valley. It is located in a "frost pocket" but has never failed to produce a good crop. The trees make a rapid growth and the quality of the nut is excellent; it has a high percentage of meat inside a thin shell.

Yours truly,

A. T. POLENSKE

NOTE: Mr. Polenske owns and operates an orchard near the original Schafer tree. He was formerly County Agent of Asotin County, Washington.

A Word As To The Future:

Agriculture may well turn to tree-crops, crops that rival corn in food per acre, tree-crops that harvest themselves, that supply timber, wind-breaks, bird and squirrel havens, flood-controls, soil conservation, and a net return all in one breath. Ask us about it.

PLANT WALNUTS FOR FUTURE SECURITY
EAT THEM FOR HEALTH

THIN-SHELLED BLACK WALNUTS

Grafted Trees

The thin-shelled varieties of American Black Walnuts are selections from the best of our native nuts. They have about twice the proportion of meat as the ordinary black walnuts. Most trees will bear the third year after planting. We list three of the best varieties.

THOMAS—A large nut cracking out about 90% halves and quarters. **MEAT**—light-colored, mild flavored and very fine. **TREE**—tall, very rapid grower. Tends to alternate production.

STABLER—Tree smaller and more spreading than Thomas. Nut very thin shelled. Many kernels come out entire. Rich flavor. Bears regularly.

OHIO—A large nut with a very large hull. Considered very ornamental. A consistent bearer.

Grafted walnuts bear early, usually the third year after planting. Production increases rapidly.

Meats in large pieces and of uniform quality are very much in demand at good prices. The industry is new and growing. Few good nuts or quality meats of black walnuts are on the market.

A windbreak or fence-row planting should be a splendid investment. Along creek banks or well drained bottoms they do wonderfully.

There is a ready market for these good nuts.

For permanent trees we suggest you plant 60 feet apart or 12 trees per acre. Interplant with Wahlbert peaches, 96 trees per acre. Fence row planting may be closer.

There is also a big possibility in growing Black Walnut timber. It is valuable.

THOMAS
American Black Walnut

Actual size—note large amount of kernel.

OTHER NUT VARIETIES

FILBERTS or Hazelnuts:

Filberts, as known commercially, are European, or Hybrid Hazelnuts, and are much larger than our native Hazels.

Commercial plantings are practical in many sections. It is a fine nut to try almost anywhere. Large sized trees produce much quicker results.

CHESTNUTS:

Chestnuts do well in many places. Quite a few kinds are growing and producing here. American, European and Chinese varieties are all good. The Chinese is probably the hardest and the most dependable. It is also almost immune to the Chestnut Blight that ruined the eastern trees of American Chestnut. The Chinese is sweet like the American and the nut comes out free from inner skin or pellicle when opened. Plant two or more varieties.

ALMONDS:

Several kinds of Almonds are doing well here in the Lewiston-Clarkston valley. They are about as hardy as peaches but more susceptible to early winter freezes. We are specializing in hardier varieties that do well in most peach areas.

PECANS:

Paper-shell, Northern Pecans are promising. The trees are magnificent, the nuts good but production rather in the experimental stage. Plant two or more for pollination.

WAHLBERT PEACH

(Plant patent pending)

Hardiness—Color—Quality—Firmness—Productivity

WAHLBERT PEACH

(Plant Patent #520)

Has never missed a crop

The WAHLBERT PEACH is often considered a better Hale, is two weeks earlier, higher colored and much more productive. It is FREESTONE, SURE-CROPPING, a real money-maker. The hardest peach we know.

This excellent peach, originated by A. W. (Bert) Wahl, Clarkston, Washington, first bore in 1921. Its attractiveness was immediately apparent and its good qualities appreciated. However it was not until a series of severe winters ruined crops of all other varieties that its unusual hardiness was known. The WAHLBERT PEACH has not failed in twenty years.

It takes many good qualities to MAKE a peach, and The WAHLBERT has them. It is this happy combination of good qualities that puts it out in front among the many new peach varieties.

When you grow fruit it is production that counts. And by production we mean the amount of good merchantable fruit per acre. WAHLBERT is the answer.

SPECIAL FEATURES OF WAHLBERT

1. **COLOR**—Deep red over golden yellow.
2. **FLESH**—Rich yellow.
3. **HARDINESS**—Crops when others freeze.
4. **PRODUCTIVITY**—Bears abundantly, self-fertile.
5. **COLORING**—Early, well ahead of picking time.
6. **SEASON**—Two weeks ahead of Hale. It ripens when good peaches are scarce.
7. **ADHERENCE**—Does not fall. Sticks to the tree even after ripening.
8. **SHAPE**—Almost round, depressed at apex, packs easily and well.
9. **FLAVOR**—Rich and good—no astringency or bitterness near pit. Tasty.
10. **SIZE**—Large, about 3"x3".
11. **CANNING**—Excellent home canner and very promising for commercial canning, rich juice.
12. **SHIPPING**—Firm flesh, medium tough adhering skin—does not show bruises readily. Holds up.

In WAHLBERT season other good peaches are scarce. We think it firmer and better than any freestone peach ripening near its season. Altho resembling Hale in shape and appearance WAHLBERT is higher colored, much more productive and has no astringency about the pit.

In direct contrast to Hale the tree is large and vigorous, buds extremely hardy, the bloom very

large, abundant and showy; a better Hale, freed of Hale defects of tree and production.

The tenacity with which WAHLBERT adheres to the tree means more peaches in the basket, enables picking with a smaller crew. With its firmness, flavor and rich, syrupy juice this peach is much in demand.

Excerpts from Experiment Station Reports:

"The fruit size and color was good." "The quality of the fruit was good." "... about two weeks earlier than Elberta." "The Wahlbert showed very good dark-red over-color and appeared quite firm." "Yields of both trees were larger than from any other trees in our test plots."

Lewiston, Idaho, Mar. 1st, 1942.

Mr. H. Lynn Tuttle,
Clarkston, Wash.

Dear Mr. Tuttle:

I am anxiously awaiting for the Wahlbert Peach trees which I have ordered. This will be my third planting of Wahlbert Peach trees. In my orchard I have all of the best varieties of peach trees, but I consider the Wahlbert the best peach. Its size and color quickly attracts anyone. Its flavor and texture are excellent. The trees began bearing the second year and I have had a good yield every year. The trees are strong and show no sign of disease common to peach trees.

Very cordially yours,
J. R. Sparks.

Freewater, Oregon, Aug. 6, 1941.

Mr. Lynn Tuttle,
Clarkston, Wash.

Dear Sir:

The Wahlbert is one of the finest varieties grown and the best canner. I am harvesting my crop now, Aug. 6. Expect 200 boxes from 35 trees. I am going to make room for 2 acres this fall.

When they are ripe they do not fall and they stay firm in handling.

We cannot speak too highly of this peach and will send in order for more this fall.

Dale McDaniel

Note—Mr. McDaniel's trees were 4 years old. He used apple boxes for bulk marketing.

E. A. WHITE FRUIT CO.
Lewiston, Idaho

Dear Sir:

Last year we ordered 200 of these trees, which had been named the "Wahlbert," and, I believe, it will prove to be one of the finest freestone peaches so far developed.

E. A. WHITE

HALO
(Patent pending)

A Peach of a Peach. Very firm, rich red, yellow freestone of about Golden Jubilee season. A heavy producer. Seemingly very frost resistant. Colors deeply before ripe and holds to the tree. Developed from Tuscan. First bore fruit in 1928.

FRUIT VARIETIES

* Varieties are listed in ripening order. "O" indicates earliest variety listed. "25" indicates it is 25 days after the earliest variety, etc.

We try to list only the best or most popular varieties but can furnish almost anything. Many of the older sorts have been replaced by better.

APPLES—

- *0 CRIMSON BEAUTY (Early Red Bird)—Fine, hardy, productive, larger than Transparent and 10 days earlier.
- 10 YELLOW TRANSPARENT—Early yellow, fine for sauce.
- 20 EARLY MCINTOSH—A new apple of promise. McIntosh-Transparent cross.
- 30 WILSON'S RED JUNE—Rich in color and tasty. An improved Red June.
- 50 RED GRAVENSTEIN—Fine cooking and eating.
- 50 WEALTHY—Bright red, tart, excellent, large.
- 70 WINTER BANANA—Very desirable cooking and eating.
- CARLTON—A better MCINTOSH.
- DARK JONATHAN—Colors deeply and early.
- JONATHAN—Red striped, fine for every use.
- RED DELICIOUS—High color, aromatic, choice eating.
- YELLOW DELICIOUS—Cooking and eating. Popular. Productive, excellent.
- ROME BEAUTY (Red)—Fine eater. Grand baker.
- WINESAP—Winter eater and cooker, red.
- DARK WINESAP—Earlier coloring.
- YELLOW NEWTOWN (Newtown Pippin)—Greenish-yellow, keeper.

CRAB APPLES—

- WHITNEY—Large, red stripe, good.
- SIBERIAN—Hardy, productive.

DWARF PEAR TREES—

Grow full sized fruit on dwarf trees. Fine for the back yard. Three year old trees ready to bear. Bartlett, Flemish Beauty, \$2.00 each.

PEARS—

- CLAPP'S FAVORITE—A fine, large, home orchard pear.
- BARTLETT—Favorite for eating and canning, juicy, buttery.
- FLEMISH BEAUTY—Large, productive, quality.
- GORHAM—Bartlett type but later and keeps months longer.
- D'ANJOU—Splendid winter eating pear.
- BOSC—Large, long-neck, late dessert pear.

PEACHES—(*) Indicates hardiest varieties. (Y. F.—Abbreviation, yellow freestone.)

*0 *MAY FLOWER—Dessert peach, white flesh.

- 18 VANITY—Yellow, semi-cling slicing peach of excellent quality. A good one to sell.

- 24 RED HAVEN—Y. F. A real addition to early peaches and attracting attention wherever peaches are grown. Fine quality and color.

- 28 HALO—Y. F. patent applied for. New peach of our own development. Excellent eating, firm, large, very high-colored. A heavy, young producer. Won first place in a National Fruits Show in 1939. Seems very resistant to spring frosts. Ships and handles well.
- 30 GOLDEN JUBILEE—Y. F., fairly firm, splendid tree and fruit.
- 40 *HALE HAVEN—Medium size, productive, well-colored. Needs heavy trimming for size.

- 42**WAHLBERT—Best money maker of all—see description.

- 52 EARLY ELBERTA—Elberta type but earlier and better canner.
- 56 ELBERTA—Y. F., standard freestone canner.
- 56 PEAK CLING—Productive and good canner.
- 58 J. H. HALE—Y. F., one of the best commercial peaches; large, handsome canner.

60 *MUIR or MALTA—Y. F., non-acid, good canner.

62 *INDIAN CLING—Red flesh; used extensively for pickling.

75 FREDRICKA—Y. F. Productive and fine quality. Eating or canning. Hardy.

90 SALWAY—Slicing or canning; rather mild.

105 KRUMMEL'S OCT.—Y. F., large, eating.

APRICOTS—

- EARLY CHINESE—Fine, hardy, productive. Not large, but a great favorite.
- PERFECTION—This new cot is proving to be one of the best. Large size, rich yellow, uniform ripening, firm for handling and shipping.
- WENATCHEE (Wenatchee Moorpark)—Very large, commercial.
- BLENNHEIM—Excellent quality, medium size, productive.
- TILTON—One of best commercial canners.

CHERRIES—Sweet.

- *0 TARTARIAN—Medium sweet, dark, juicy.
- 10 ROYAL ANNE—Commercial canner.
- 10 DEACON—Large, dark, does not rain-crack, hardy, can pick before or after Bing.
- 10 BING—Large, dark, shipper.
- 15 LAMBERT—Large, dark, fine tree.
- 20 BLACK REPUBLICAN—Large, black, firm.
- Note: Use Deacon, Tartarian or Black Republican for pollinizers with Lambert, Bing or Royal Anne.

CHERRIES—Sour.

- 0 MAY DUKE—Large, early, favorite.
- 15 MONTMORENCY—Large, light red, standard canner.
- 20 LATE DUKE—Large, dark red, fine, late.

PLUMS AND PRUNES—

- *0 SANTA ROSA—Excellent, early shipper. Demands top prices everywhere.
- 5 PEACH PLUM—Large, purple-red, excellent eating.
- 14 EARLY ITALIAN (De Maris strain)—Similar to Italian but two weeks earlier. Commercially very profitable.
- 20 WEATHERSPOON—Colors early, does not fall, large and good for shipping.
- 32 ITALIAN—The standard prune of the N. W. Excellent for eating fresh, drying or canning or shipping.
- 35 DOUBLE X FRENCH—An improved Petite, very sweet.
- 35 IMPERIAL GAGE—Greenish-yellow, small and sweet.
- 40 DAMSON—Small, dark blue, tart, cooking and preserves.
- 50 PRESIDENT—Commands a fine price on all markets. Follows Italian prune on markets and sells considerably higher. Very large.

NECTARINES—

- Similar to peaches but smooth skinned and distinctively flavored. Aromatic and delicious.
- QUETTA—We prefer this one, large, sweet and fine.

QUINCES—

- They are very fine in preserves or jellies, also fine candied. Small trees with a lovely bloom.
- PINEAPPLE—This fine variety is also delicious baked.

GRAPES

AMERICAN VARIETIES—

(Considered hardy without covering).

- FREDONIA (Black)—A New York Exp. Station grape rapidly gaining in favor.
- PORTLAND—Early white.
- MOORE'S EARLY—Black, large grape, early.
- CAMPBELL'S EARLY—Black, large, excellent.
- NIAGARA—White; called the "White Concord."
- KEUKA—Dark red, a new grape of exceptional aroma, quality and hardiness. American-European hybrid.
- CACO—Red, new grape of fine eating qualities.
- CONCORD—Black, the good old standby of American grapes. Best juicer.
- AGAWAM—Red, good, dependable, excellent arbor grape.
- SHERIDAN—A bigger, sweeter, better and more productive Concord. A few days later than Concord.

EUROPEAN VARIETIES—

(For sure crops cover in winter.)

- CSABA—Greenish-white, a very hardy, fine, early variety from northeastern Europe. Muscat flavor. Ripens in July. Not usually covered.
- RIBIER—Black, very large, new, early, fine, firm.

- MUSCAT—White, excellent eating grape.
- SWEETWATER—White, small, sweet, early.
- THOMPSON SEEDLESS—White, fine eating or drying.
- FLAME TOKAY—Red, a favorite large grape.

CURRENTS

- RED LAKE—New, probably the largest sized and easiest picked of any currant. Very productive.

GOOSEBERRY

- OREGON CHAMPION—Green, large, free from mildew.

BERRIES

- YOUNGBERRIES—We supply a thornless type. A wonderful berry.
- BOYSENBERRY—Later than Youngberry, hardier, trifle larger.
- LUCRETIA DEWBERRY—Best of dewberries.
- BLACKBERRIES—Upright or trailing types.

RASPBERRIES—

- INDIAN SUMMER—A new addition to the two-crop berries. Very early, large, dark, hardy and productive. For home use or local market. Sets another crop in late fall. Dark red, fine.
- NEWBURGH—Very large, productive, wonderful shipper; N. Y. Exp. Sta.
- SODUS—Purple raspberry of large size, excellent flavor. Abundant bearer and disease resistant.
- MORRISON—The largest blackcap and probably the best. Productive and disease resistant. NEW.

STRAWBERRIES—

- We list only a few that have proved most satisfactory in the Inland Empire.
- NEW OREGON—Large, single-crop berry.
- MASTADON—Large everbearer.

ROCKHILL—Almost runnerless everbearer, large and fine. Best for the home.

SHADE TREES

In most varieties of shade trees we list only one size but can supply other sizes at proportionate prices.

- | | | |
|--|-------|--------|
| ASH—Green or white | 8-10' | \$2.00 |
| BIRCH—European White | 8-10' | 2.00 |

| LOCUST—Black | 8-10' | 1.50 |
| LOCUST—Globe, grafted for 6-7 ft. stems | | 2.50 |

LOCUST—Idaho Red Flowering.

This lovely flowering tree is the result of cross-pollination of the common locust with the Rose Acacia, or pink locust. It was developed in Idaho. Growth habit similar to common locust. No seed is developed or seed pods formed. It blooms intermittently all summer. Thorns are few, short and scattered. Really a fine, clean, tree.
